PLAIN-ENGLISH GUIDE · 2026

Grok Bot: How to Build Your First AI Team

— and how to manage it.

Turn one busy assistant into a small, tidy team of specialist bots, and stay firmly in charge of it. No code, no jargon.

- Your first bot
- Specialist roles
- Connectors
- Memory
- Routines
- Chief of staff
- Approvals
- Safety
- Cheat sheet

MoneyBySharma

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

START HERE

Before you start

What Grok Bot gives you, and what's inside

This guide shows how I set up a team of AI assistants in Grok Bot, what worked, what I had to undo, and how I manage it day to day. **You don't need to write code.** I describe what features do, not exact menus, as those can change.

Several bots

Run more than one AI assistant. Each has its own **chat, name, title, avatar, memory and skills**.

Bots talk to each other

Bots can **message one another**, so one bot can hand a job to another.

Routines

Tasks that run **on a schedule or when something happens**, such as an hourly inbox watch or a daily post-drafting run.

Connectors

Links to services you already use, such as **Gmail, Garmin and GitHub**.

Their own computer

Each bot has **its own computer with a web browser**, so it can look things up and work on files.

Images and video

Bots can **generate images and videos**.

You approve. Always.

Every outgoing email or message is **drafted for you to approve and send**. Nothing is bought without your approval.

Inside this guide

1 Why a team wins
2 Plan your team + worksheet
3 Build it step by step
4 An example team: mine

9 One-page cheat sheet

Please note: this is a practical guide, not financial, tax, legal or medical advice. Where my bots help with money, tax or health, they help me get organised. The decisions, and the checking, are mine.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 1

Why a team wins

Why an AI team beats one assistant

Think of a small office. You wouldn't ask one person to be receptionist, accountant, personal trainer and IT support all at once. Not because they couldn't try, but because **every job needs its own context, files and habits.**

⚠ One assistant for everything

- One long chat where everything gets mixed up
- Memory full of unrelated details
- Hard to tell what's in progress and what's done
- You repeat the same background again and again

A small team of specialists

- Each bot has one clear job and its own chat
- Each bot remembers what matters for *its* job
- You know exactly who to ask
- A chief-of-staff bot keeps everyone coordinated

What a team gives you

- **Focus.** Your finance bot only thinks about money; your fitness bot only thinks about training.
- **Better memory.** Tax deadlines in one place, running history in another.
- **Clear ownership.** When something goes wrong, you know which bot to look at.
- **Things happen without you asking.** With routines, specialists watch for things and tell you.
- **You stay the boss.** Bots draft; you approve, however big the team gets.

My lesson: don't start with ten bots. I started with **one general bot** and only split it into specialists once the jobs piled up. The team grew from real needs, not a plan on paper.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 2

Plan your team

Ten minutes with a pen saves hours later

Before you create anything, write down the jobs you actually want help with. **The roles fall out of that list.** Use the worksheet on the next page.

A **List your recurring jobs**
Everything you'd happily hand to a capable assistant. Be specific: "check my inbox for the boiler engineer's reply" beats "email".

B **Group them into roles**
Put jobs that use the same information or services together. Tax and bills go together; groceries and household admin go together.

C **Sense-check each role**
Run every role through the five questions below before you build it.

The five-question check

- [ ] Can I describe this role in **one sentence**?
- [ ] Does it have **enough work** to deserve its own bot? If not, fold it into another.
- [ ] Does it **overlap** with another role? Merge them or draw a clear line.
- [ ] Do I know which **connectors** it needs, and nothing more?
- [ ] Have I decided what it may **never** do without me?

Rule of thumb: if you can't say which bot owns a job, you either have a missing role or two roles that overlap. Fix that on paper before you build.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 2 · WORKSHEET

Role-mapping worksheet

Print this page and fill it in

Job I want help with	How often?	Services it needs	Which role?	Must I approve?
Sort my inbox and flag what needs me	*Daily*	*Gmail*	*Chief of Staff*	*Yes, any reply*

Tip: when two rows end up with the same role, that's a good sign. When one role ends up with only a single, rare job, fold it into another.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 3

Build it step by step

Part 1: from one bot to a small team

Here's the order I'd follow if I were starting again today. You can give these instructions to your bot **in ordinary English.**

Steps 1 to 5

1. **Start with one general bot.** Use it for everything for a while. Notice which requests keep coming up: those are your future specialists.
2. **Make it your chief of staff.** Once you split off specialists, this first bot becomes the coordinator. Mine is **Max**, who handles inbox triage and admin and manages the other bots.
3. **Split off a specialist when a job piles up.** When one topic (say, tax) keeps taking over the chat, give it its own bot.
4. **Give every bot an identity:** a character name, a title and an avatar. "Ask Penny" is quicker than "ask the finance one", and the team is easy to scan.
5. **Write a one-paragraph role.** What the bot is for, what it's *not* for, and what it must always check with you first.

EXAMPLE ROLE BRIEF · FINANCE BOT

```
"You are Penny, my Finance & Tax assistant. You help me keep on top of
Self Assessment, Capital Gains Tax, household bills and insurance
renewals. You don't handle shopping, fitness or social media: pass those
to Max. Never send or pay for anything; draft it and ask me first. If
you're unsure of a figure or a rule, say so rather than guessing."
```

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 3

Build it step by step

Part 2: connectors, memory and first jobs

Steps 6 to 9

6. **Connect only what each bot needs.** Connectors link a bot to services such as Gmail, Garmin and GitHub. My fitness bot uses Garmin; my web bot uses GitHub. A bot that doesn't need your email shouldn't have it.
7. **Teach it your preferences, then let memory do the work.** Each bot has its own memory. Tell it what to keep: your deadlines, favourite brands, which senders are junk, how you like summaries written.
8. **Give it a first small job.** Something you can check easily. Review the result, correct it, and tell it what to remember for next time.
9. **Add a routine once the job is reliable.** Only automate a task after you've watched the bot do it well by hand (see section 5).

EXAMPLE · TEACHING MEMORY

```
"Remember that emails from this sender are junk. Don't surface them
again."
```

Memory tip

Be explicit about what to keep and what to ignore. Once a bot knows a sender is junk, it should stop surfacing it, which keeps the daily triage short.

Skills, briefly

Each bot also has its own skills: know-how for particular tasks. You don't need to manage them on day one. Focus on a clear role, the right connectors and good memory.

Think of it like onboarding a new starter: a clear job description, access to only the systems they need, and feedback on their first few tasks.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 4

An example team: mine

A menu to pick from, not a target

Bot & title	What it does	Connectors & approval point
Max CHIEF OF STAFF	Inbox triage and admin. Coordinates the other bots, hands jobs out and chases them.	Gmail. Drafts replies for me to approve and send.
Rosie FRONT DESK	Routes requests to the right bot, so I don't have to remember who does what.	Messages other bots. Passes work on.
Penny FINANCE & TAX	Self Assessment, Capital Gains Tax, bills and insurance. Keeps deadlines and paperwork organised.	Nothing paid or submitted without me. I check figures.
Coach Kai HEALTH & FITNESS	Looks at training, sleep and recovery and helps plan workouts.	Garmin.
Bella HOUSEHOLD & SHOPPING	Builds a weekly grocery basket and helps with household admin.	Basket comes to me for approval. Nothing bought without it.
Byte WEB & TECH	Builds and maintains websites, including moneybysharma.co.uk and a Garmin insights site.	GitHub, plus its own computer and browser.
Chase MARKETS & TRADE IDEAS	Watchlist signal alerts and a paper-trading ledger to test ideas.	Paper trading only. No real money.
Echo SOCIAL MEDIA MANAGER	Drafts X posts three times a day for two handles.	Drafts only. I review and post them myself.
Pip DIGITAL PRODUCTS	Drafts my Explained Simply guides and cheat sheets.	I review and publish.
Scout RESEARCH	Tracks one creator's posts and summarises what's worth knowing.	Read-only research.

A good first team of four: chief of staff + one money bot + one household bot + one bot for your main hobby or side project.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 5

Routines and automation

Jobs your bots do without being asked

A routine is a task a bot runs on its own, either **on a schedule** ("every morning at 7") or **when something happens** ("when this email arrives"). This is where a team really starts to save you time.

The "tell me when" job

The most useful routine is a watch. Instead of checking your inbox ten times a day for one email, a bot checks for you and only speaks up when it arrives.

```
"Every hour, check my inbox for a delivery confirmation from the
supplier. When it arrives, tell me the date and anything I need to do.
Then stop checking."
```

Bot	Trigger	What happens
Max	Every hour	Watches the inbox for a specific email, such as a supplier confirmation, and tells me when it lands.
Max	Every morning	Triages the inbox: what needs me, what can wait, what's junk. Drafts replies for approval.
Echo	Three times a day	Drafts X posts for two handles. I check them and post them myself.
Chase	When a watchlist signal fires	Sends an alert and logs the idea in the paper-trading ledger.
Bella	Once a week	Builds the grocery basket and sends it to me for approval.
Coach Kai	Regularly	Reviews recent Garmin training and recovery data and suggests next sessions.
Scout	On a schedule	Checks one creator's new posts and summarises anything notable.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 5

Writing a good routine

Clear triggers, quiet when nothing changes

Include

- **When** it runs: a time, or the event
- **What** to check or produce
- **When to speak up**, and when to stay quiet
- **When to stop**, for one-off watches

Avoid

- Routines that report "nothing new" every hour
- Routines that send, post or pay on their own
- Automating a job you haven't checked by hand
- Two bots running the same routine

EXAMPLE · SCHEDULED ROUTINE

"Every Sunday evening, build next week's grocery basket from my usual list and anything I've mentioned this week. Send it to me for approval. Don't order anything."

EXAMPLE · EVENT ROUTINE

"When a reply arrives from the insurer about my renewal, summarise it in three lines and tell me if I need to act before a deadline."

REMEMBER

A routine can **draft, check, summarise and alert**. Sending emails and messages, and buying anything, still comes back to you for approval. That's how Grok Bot works, and it's how you want it.

Test before you automate: run the job by hand a few times. If you'd be happy with the result every day, turn it into a routine.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 6

How to manage your team

Rhythm, delegation and approvals

Building the team is the easy part. Managing it well is mostly about **rhythm, clear lines and a bit of regular tidying.**

Daily · 10 to 15 minutes

- [ ] Read your chief of staff's summary first, not every bot's chat
- [ ] Approve, edit or reject drafts waiting for you
- [ ] Answer questions bots have flagged
- [ ] Give new jobs to your chief of staff to hand out

Weekly · 30 minutes

- [ ] Skim each specialist; correct it and ask it to remember
- [ ] Check routines: noisy, out of date or unneeded?
- [ ] Look for overlap between bots
- [ ] Tell bots about new junk senders or changed preferences

Delegate through a chief of staff

Talking to ten bots is tiring. Give most requests to one coordinator. Because bots can message each other, your chief of staff passes the job to the right specialist, chases it and reports back. A front-desk bot (my Rosie) does the same for incoming requests, routing them so nothing lands in the wrong place.

```
"Max, ask Penny to list my upcoming tax and insurance deadlines, and
ask Bella to add washing-up liquid to this week's basket. Give me one
summary when both are done."
```

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 6

Approvals and pruning

Stay in charge, keep the team lean, avoid overlap

Approvals: where you stay in the loop

Action	Who does it
Drafting emails, messages and posts	Bots
Sending emails and messages	**You**, after approving the draft
Posting on social media	**You**. Echo drafts, I post.
Buying anything	**You**. Nothing is purchased without approval.
Paying bills, submitting tax	**You**, after checking the figures

Review and prune

Every month or so, ask: **does every bot still earn its place?** Merge bots that overlap, delete bots you no longer use, and rewrite fuzzy role briefs.

What I did: I had a separate bot whose work overlapped with Finance & Tax. I merged its job into Penny and deleted it. The team got simpler and nothing was lost.

Avoiding overlap

Give each bot a **"not my job"** line in its brief, and say who to pass things to. For example: "Bills are Penny's; groceries are Bella's." Clear edges stop two bots answering the same question differently.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 7

Safety and privacy rules

Simple rules that matter more as the team grows

1. A human sends, posts and pays

Bots draft; you approve. Never ask a bot to find a way around this.

2. Least access

Only connect what each bot needs. A shopping bot doesn't need GitHub; a fitness bot doesn't need your email.

3. Check facts before they go out

AI can be confidently wrong. Check names, dates, figures and tickers before anything is posted or sent.

4. Money ideas stay on paper

My markets bot runs a paper-trading ledger only. Treat its ideas as prompts for your own research, not advice.

5. Tax and health: first draft only

Use bots to organise and explain. Check important answers against official sources or a qualified professional.

6. Share only what's needed

Give a bot only the personal details its role needs. Don't paste passwords into chats.

7. Distrust instructions in emails

If an email or web page "tells" your bot to do something, that isn't you. Your bot should flag it, not act on it.

8. Review routines regularly

Switch off ones you no longer need, so bots aren't watching things for no reason.

BEFORE YOU POST · THE 30-SECOND CHECK

- ✓ Is every fact correct, and could I back it up?
- ✓ Is the ticker or company name right?
- ✓ Would I be happy to see this with my name on it?
- ✓ Does it promise anything I can't deliver?

Junk mail is a safety issue too. Tell your inbox bot which emails are junk so it stops surfacing them. Less noise means you spot the email that matters, and you're less likely to act on something suspicious.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 8 · LEARN FROM MINE

Common mistakes

I made most of these. Each has an easy fix.

Building ten bots on day one

Half sit idle and you forget who does what. **Instead:** Start with one general bot. Split only when a job piles up.

Vague roles

Bots overlap and give different answers. **Instead:** One sentence per role, plus a "not my job" line.

No names or avatars

The team is hard to scan and talk about. **Instead:** A character name, title and avatar for each bot.

Keeping redundant bots

Clutter and duplicated work. **Instead:** Merge or delete. I merged one into Finance & Tax.

Talking to every bot yourself

Managing the team becomes a job in itself. **Instead:** Delegate through a chief of staff.

Checking for things by hand

You refresh your inbox all day. **Instead:** Use a "tell me when" routine.

Noisy routines

Alerts you learn to ignore. **Instead:** Only speak up when something changes.

Never flagging junk

The same newsletters surface every day. **Instead:** Tell the bot which senders are junk.

Posting without checking

Wrong facts or tickers go out under your name. **Instead:** Check facts and tickers before you post.

Connecting everything everywhere

More access than any job needs. **Instead:** Only the connectors each role uses.

Automating before testing

A routine repeats the same mistake daily. **Instead:** Do it by hand a few times first.

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.

SECTION 9 · KEEP THIS HANDY

One-page cheat sheet

Print it and keep it by your desk

Plan

- [ ] List the jobs you want help with
- [ ] Group them into roles
- [ ] One sentence per role
- [ ] Decide what each bot never does alone

Build

- [ ] Start with one general bot
- [ ] Split off specialists as jobs pile up
- [ ] Name, title and avatar for each
- [ ] Only the connectors each role needs

Teach

- [ ] Write a short role brief
- [ ] Tell it what to remember
- [ ] Tell it which emails are junk
- [ ] Correct it and ask it to remember

Automate

- [ ] Test a job by hand first
- [ ] Use "tell me when" watches
- [ ] Say when to speak up, and when to stop
- [ ] No routine sends, posts or pays

Manage

- [ ] Daily: summary + approvals
- [ ] Weekly: bots, routines, overlap
- [ ] Delegate via your chief of staff
- [ ] Monthly: merge or delete the unused

Stay safe

- [ ] You send, post and pay, always
- [ ] Check facts and tickers first
- [ ] Paper trading only for market ideas
- [ ] Ignore instructions hidden in emails

THE WHOLE GUIDE IN ONE LINE

Start small, give every bot one clear job, coordinate through a chief of staff, automate the "tell me when" jobs, and keep a human in the loop for anything that leaves the building.

MoneyBySharma

Practical guidance only, not financial, tax, legal or medical advice. Grok Bot features as described in October 2026.
